Portanto

$$\frac{1}{f_{x}}(x) = \begin{cases}
0 & \text{si } x < 0 \\
\frac{2\theta x - x^{2}}{\theta^{2}} & \text{si } x \in [0, \theta) \\
1 & \text{si } x > \theta
\end{cases}$$

Entonces la función de densidad de Xin será

$$f_{X_{(m)}}(y) = n F_{X}(y)^{m-1} f_{X}(y) = n \left(\frac{2\theta y - y^{2}}{\theta^{2}} \right)^{m-1} \cdot \frac{2}{\theta^{2}} \cdot (\theta - y) \cdot I_{(0,6)}(y) = \frac{n}{\theta^{2m}} \left(2\theta y - y^{2} \right)^{m-1} \cdot (2\theta - 2y) \cdot I_{(0,6)}(y).$$

Está distribución depende de θ por lo que vamos a hacer una transformación para intentar encontrar una cantidad pivotal. Como $2\theta-2y$ es la derivada de $2\theta y-y^2$ respecto a y podemos probar catallando la distribución de $q(X_{ini})=W=2\theta X_{ini}-X_{ini}^2$

Fw (w) = P(W < w) = P(20 Xin) - Xin) = w = P(Xin) - 20 Xin) + w > 0 } =

$$= \begin{cases} 1 & \text{s. } \theta^{2} < w \\ P ? X_{(n)} \leq \frac{2\theta - \sqrt{4\theta^{2} - 4w}}{2} ? + P ? \frac{2\theta + \sqrt{4\theta^{2} - 4w}}{2} \times X_{(n)} \end{cases} \subset C.C.$$

$$= \int_{X_{min}} \left(\theta - \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2} - 16} \right) + 1 - F_{X_{min}} \left(\theta + \sqrt{\theta^{2}$$
